HIBCC Smartphone/Tablet UDI Decoders Released

DATE: June 9, 2015
TO: HIBCC Labelers
FROM: HIBCC Administrative Office
SUBJECT: Release of Smart Phone and Tablet Apps for UDI Decoding

HIBCC has released applications for both the Android and Apple iOS smartphone and tablet platforms that will decode HIBCC-labeled packages and identify the various components of the FDA-mandated Unique Device Identifier.

The HIBCC UDI Decoder apps were created to complement our existing [online utility](#), available on our [website](#), that creates HIBCC UDI-Compliant symbols and UDI Device and Production Identifier data.

Labelers can now both create and decode HIBCC symbols using these HIBCC-supplied tools, and anyone who needs to know HIBCC UDI information can use their portable devices to decode our labels.

The applications, which are available without charge, can be downloaded from the Google Play and Apple App stores.

To download the Android version visit the Google Play store and search "HIBCC UDI Decoder" or [click here](#).

To download the Apple iOS version visit the App Store and search "HIBCC UDI Decoder" or [click here](#) for the iPhone link and [click here](#) for the iPad link.
